Proof you can believe in

Average volume-assured pressure support

AVAPS delivers customized patient care by automatically adapting pressure support to maintain a consistent tidal volume. AVAPS automatically adjusts to disease progressions and changing patient needs. It helps to maintain optimal patient comfort while supporting patient care and ventilation efficacy and simplifying the titration process.¹

AVAPS provides beneficial physiological improvements, resulting in a more efficient decrease of PtcCO₂ compared to BPV-S/T therapy alone.¹

The AVAPS ventilation feature automatically provides treatment for PaCO₂ reduction.¹

AVAPS has been developed to ensure a more consistent tidal volume per breath while delivering the comfort and advantages of pressure support ventilation.¹
